

## Two Mile Ash School Progression in Calculation Policy

| Objective and Strategies | Concrete | Pictorial | Abstract |
| :---: | :---: | :---: | :---: |
| Combining two parts to make a whole: partwhole model | Use cubes to add two numbers together as a group or in a bar. |  | $4+3=7$ $10=6+4$ <br> Use the part-part whole diagram as shown above to move into the abstract. |
| Starting at the bigger number and counting on | Start with the larger number on the bead string and then count on to the smaller number 1 by 1 to find the answer. | $12+5=17$ <br> Start at the larger number on the number line and count on in ones or in one jump to find the answer. | $5+12=17$ <br> Place the larger number in your head and count on the smaller number to find your answer. |
| Regrouping to make 10 | $6+5=11$ | Use pictures or a number line. Regroup or partition the smaller number to make 10. | $7+4=11$ <br> If I am at seven, how many more do I need to make 10. How many more do ladd on now? |

|  | Start with the bigger number and use the smaller number to make 10. | $\begin{aligned} & 3+9= \\ & 9+5=14 \end{aligned}$ <br> 14 |  |
| :---: | :---: | :---: | :---: |
| Adding three single digits | $4+7+6=17$ <br> Put 4 and 6 together to make 10. Add on 7 . <br> Following on from making 10, make 10 with 2 of the digits (if possible) then add on the third digit. |  | $\begin{aligned} \frac{4+7+6}{10} & =10+7 \\ & =17 \end{aligned}$ <br> Combine the two numbers that make 10 and then add on the remainder. |
| Column methodno regrouping | $24+15=$ <br> Add together the ones first then add the tens. Use the Base 10 blocks first before moving onto place value counters. | After practically using the base 10 blocks and place value counters, children can draw the counters to help them to solve additions. | Calculations $\begin{array}{r} 21+42= \\ 21 \\ +42 \end{array}$ |

Objective and
Strategies
Taking away ones
Counting back
show how objects can be taken away.

| Find the difference | Compare amounts and objects to find the difference. <br> Use cubes to build towers or make bars to find the difference <br> Use basic bar models with items to find the difference | Count on to find the difference. <br> Comparison Bar Models <br> Draw bars to find the difference between 2 numbers. <br> Lisa is 13 years old. Her sister is 22 years old. Find the difference in age between them. | Hannah has 23 sandwiches, Helen has 15 sandwiches. Find the difference between the number of sandwiches. |
| :---: | :---: | :---: | :---: |
| Part -Part -Whole Model | Link to addition- use the part whole model to help explain the inverse between addition and subtraction. <br> If 10 is the whole and 6 is one of the parts. What is the other part? $10-6=$ | Use a pictorial representation of objects to show the part part whole model. | 5 <br> 10 <br> Move to using numbers within the part whole model. |
| Make 10 | $14-9=$ <br> Make 14 on the ten frame. Take away the four first to make 10 and then takeaway one more so you have taken away 5. You are left with the answer of 9. | Start at 13. Take away 3 to reach 10. Then take away the remaining 4 so you have taken away 7 altogether. You have reached your answer. | $16-8=$ <br> How many do we take off to reach the next 10 ? <br> How many do we have left to take off? |

Objective and
Strategies
Doubling
Counting in
multiples

| Repeated addition | Use different objects to add equal groups. | There are 3 plates. Each plate has 2 star biscuits on. How many biscuits are there? <br> 2 add 2 add 2 equals 6 $5+5+5=15$ | Write addition sentences to describe objects and pictures. |
| :---: | :---: | :---: | :---: |
| Arrays- showing commutative multiplication | Create arrays using counters/ cubes to show multiplication sentences. | Draw arrays in different rotations to find commutative multiplication sentences. $\begin{aligned} & 0000^{4 \times 2=8} \\ & 0000^{2 \times 4-8} \\ & 00^{2 \times 4=8} \\ & 00^{20} \\ & 00 \\ & 4 \times 2=8 \end{aligned}$ <br> Link arrays to area of rectangles. | Use an array to write multiplication sentences and reinforce repeated addition. $\left\lvert\, \begin{aligned} & 5+5+5=15 \\ & 3+3+3+3+3=15 \\ & 5 \times 3=15 \\ & 3 \times 5=15 \end{aligned}\right.$ |

| Objective and Strategies | Concrete | Pictorial | Abstract |
| :---: | :---: | :---: | :---: |
| Sharing objects into groups | I have 10 cubes, can you share them equally in 2 groups? | Children use pictures or shapes to share quantities. | Share 9 buns between three people. $9 \div 3=3$ |
| Division as grouping | Divide quantities into equal groups. <br> Use cubes, counters, objects or place value counters to aid understanding. $\begin{aligned} & 96 \div 3=32 \\ & \text { (1) } \\ & \text { (1) } \\ & \text { (2) } \end{aligned}$ | Use a number line to show jumps in groups. The number of jumps equals the number of groups. <br> Think of the bar as a whole. Split it into the number of groups you are dividing by and work out how many would be within each group. $\begin{aligned} & 20 \div 5=? \\ & 5 \times ?=20 \end{aligned}$ | $28 \div 7=4$ <br> Divide 28 into 7 groups. How many are in each group? |

Division within
arrays
remainder
Shor

| Long Division |  |  |  |
